Bees and w_____s don't usu_____ attack people, but if you annoy them or hit their h_____, they will st_____ you. The stings are qui_____ painful.

Bees can live qu__t__ happily in a h__v__ made of wood. They will collect nectar the same as they would if they were in a hole in a tree. The nec_____ and pollen they coll_____ is made into ho__ey and used for food.

Wa_____s make a 'nest' of a sort of paper. They chew pieces of wood or plants and then spit it out to make the strong wa_____ of their nest.

Write about bees and wasps.
Use some of the words in the boxes at the top of the page.

i

Some people become allergic to wasp or bee stings. They need to be especially careful around these creatures. A few people even need 'desensitising' injections at regular monthly intervals. Some people swell up, their breathing becomes wheezy and they need to be taken to hospital quickly. Luckily, most of us just have a bit of pain and a small red blister and don't have to worry. Some beekeepers develop an allergy to stings and they simply have to change their job.
