

**Big Machines**  
Concrete mixer trucks

1

A mixer truck has a tank, mixing blades, a funnel and a chute.

2

The tank holds the concrete. The blades inside the tank mix the concrete.

3

The concrete is mixing while the truck is driving along.

4

The funnel is at the top of the tank.  
This is where the concrete goes in.

5

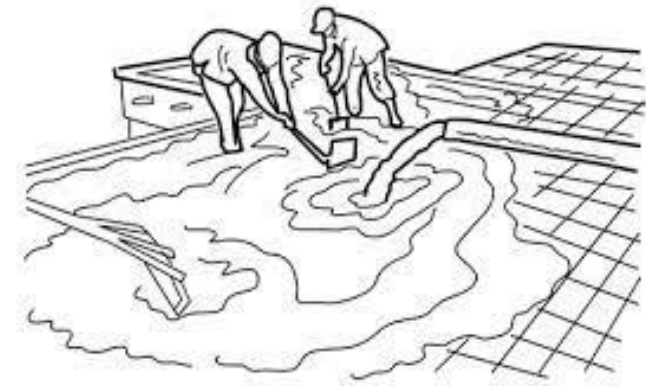

The chute is where the concrete  
comes out.

6

When the concrete comes out, men  
work with the wet concrete to make  
footpaths.

7

They also use concrete to make  
slabs for houses.
