

Arieta Batiratu      Year 1

Butterflies rest with their wings together. Moths rest with their wings apart.

Abigail Wah      Year 2

Butterflies come out during the day.  
Moths come out at night.

Jeremiah Qionibaravi      Year 2

Butterflies and moths start life as tiny eggs. Caterpillars hatch from the eggs. The eggs are on a leaf.

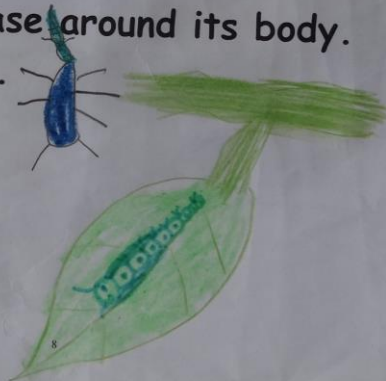

Joy Dobui Year 2

The caterpillars eat the leaves and grow bigger.

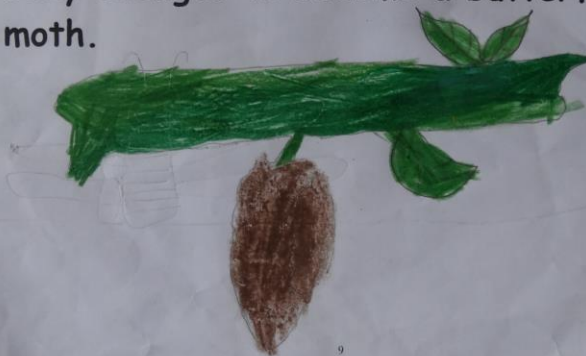

Suka Buadromo Year 1

When it is big enough the caterpillar hangs upside down from the leaf and makes a hard case around its body. This is a cocoon.

Tulia Tagicakibau Year 1

Inside the cocoon the caterpillar's body changes to become a butterfly or moth.

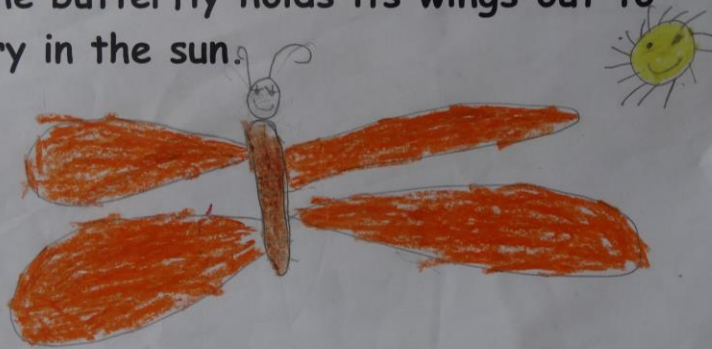

Filimoni Nasau      Year 1

After about six days the case splits open and the butterfly pulls itself out.

Ruth      Tamanitokula      Year 1

The butterfly holds its wings out to dry in the sun.

Pauliasi Dobui      Year 1

The butterfly flies away. Soon she will lay eggs on a leaf and some new baby caterpillars will hatch.
