

Frogs

1

A frog lives some of the time on the land and some of the time on the water. It is an amphibian.

2

Frogs lay eggs.

3

The eggs hatch into tadpoles.

4

Tadpoles live in water.

5

Tadpoles breathe with gills like fish do.

6

Tadpoles grow into frogs. Frogs breathe with lungs. They also breathe through their skins.

7

A frog swims with its legs and feet. The frog's feet are made for swimming. They are called webbed feet.

8

Frogs eat worms and insects.

9

Frogs have long sticky tongues. A frog's tongue moves very quickly.

10

Most frogs are green, brown or grey. This helps them hide in the grass and weeds.

11

On a cold day, a frog's blood is cold. A frog is a cold-blooded animal like reptiles.
