

Frogs

A frog lives some of the time on the land and some of the time on the water. It is an amphibian.

Frogs lay eggs.

The eggs hatch into tadpoles.

Tadpoles live in water.

Tadpoles breathe with gills like fish do.

Tadpoles grow into frogs. Frogs breathe with lungs. They also breathe through their skins.

**A frog swims with its legs and feet.
The frog's feet are made for
swimming. They are called webbed
feet.**

Frogs eat worms and insects.

Frogs have long sticky tongues. A frog's tongue moves very quickly.

**Most frogs are green, brown or grey.
This helps them hide in the grass and
weeds.**

**On a cold day, a frog's blood is cold.
A frog is a cold-blooded animal like
reptiles.**
