

Insects

Insects have three parts to their bodies. They have a head, a chest and a stomach.

Insects have six legs.

Some insects have wings. Some do not have wings.

Butterflies have wings. Bees have wings.

Some ants have wings. Some ants do not have wings.

There are many kinds of insects.

Some insects help us. Some insects eat other little insects on our plants. A ladybird beetle is one of these.

Bees help us. They make honey.

Some insects do not help us. Flies carry germs on to our food.

**Mosquitoes do not help us. They bite
us.**

All insects have babies. Baby insects come from eggs. Insects lay their eggs in many places, like on a leaf.
